NEW for 2008

BiOLOG

technology access initiative

*A rapid and comprehensive phenotype analysis of
bacteria, fungi and mammalian cells*

The Biolog phenotyping technology is a novel platform for high-throughput screening of bacteria, fungi and mammalian cells for over 2,000 phenotypes, simultaneously. The phenotypes are monitored in 'real time' to follow the kinetics of respiration/metabolism from a few hours to over a week of incubation.

The Veterinary Laboratories Agency (VLA), in agreement with **Biolog**, is now offering access to this exciting new technology to provide extensive cellular profiles, identification of gene functions, validation of drug targets, lead validation, streamlining of optimisation and toxicology studies and many other functions.

If you would like further information on this new opportunity please contact us (details overleaf):

VLA is an Executive Agency of the Department for **Environment, Food and Rural Affairs**

**The new BiOLOG: technology access initiative
will be launched in collaboration with TECHNOPATH
at an event to be held at
VLA Weybridge on 12 November 2008**

**Please send me further information
on the Launch Event to be held at VLA
Weybridge on 12 November 2008:**

Veterinary Laboratories Agency (VLA)

VLA is a centre for veterinary scientific excellence, has collaborations with research institutes, universities and commercial companies and acts as an International Reference Laboratory for a range of zoonotic diseases including Avian Influenza, TSEs, Salmonella and Brucellosis.

The main aim of the Agency is to safeguard public and animal health by providing all sectors of the animal health and pharmaceutical industries with a wide range of applied veterinary research and consultancy on diseases of farmed livestock, diagnosis of diseases of statutory and public health importance and surveillance of new and emerging diseases throughout the country.
